Accessible event planning - historical edition

ARCHIVED 2024; superseded

ARCHIVED, SUPERSEDED: this 2024 edition is retained for historical record only and is not the current operating policy.

The superseded 2024 events policy specified a five-working-day captioning notice period.

The old edition covered the same operating activity. Its prior timing must not be treated as a forecast. Historic case records show how approvals were documented at the time; they do not authorise new work under that edition.

Accessible event planning - historical edition

ARCHIVED 2024; superseded

Historical route register. These entries are examples of administrative queues in the retired edition, not current forms.

Registry ACC-994: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry ACC-1005: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry ACC-1016: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry ACC-1027: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry ACC-1038: record the request in the pending owner-verification queue; this entry is not the named exception route.
