Accessible event planning - operating guide

CURRENT 2026; effective 1 August 2026

Scope: Event hosts, participation requests and communication formats. This is fictional Meridian Works guidance. The following responsibilities apply only to the named activity, not to other procedures with similar labels.

The event accessibility coordinator arranges an alternative agenda format when a participant cannot use the printed version.

Request ACC-893 registers live captioning; ACC-839 registers an assisted-navigation booking.

The coordinator records what actually happened, identifies the responsible owner and checks the applicable route. A similarly numbered form is not interchangeable with the recorded form. For a rejected submission, retain the original request and obtain corrected evidence rather than creating a replacement event.

Registry ACC-994: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry ACC-1005: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry ACC-1016: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry ACC-1027: record the request in the pending owner-verification queue; this entry is not the named exception route.

Accessible event planning - operating guide

CURRENT 2026; effective 1 August 2026

Eligibility and operational limits. Select the named cohort and activity before applying a period or amount; different entitlements in this section are not substitutes.

Public-event captions are arranged by the accessibility coordinator; internal-training captions are arranged by the learning host.

A public-event live-captioning request should be received eight working days before the event.

A valid request contains its underlying event date and the scope used for the calculation. Reviewers distinguish acknowledgement, completion and storage periods. A deadline for submitting evidence is not a service restoration promise. If the activity or group is not stated, escalate the question rather than borrowing a nearby rule.

Registry ACC-1038: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry ACC-1049: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry ACC-1060: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry ACC-1071: record the request in the pending owner-verification queue; this entry is not the named exception route.

Accessible event planning - operating guide

CURRENT 2026; effective 1 August 2026

Document control: this 2026 operating guide is CURRENT and effective from 1 August 2026. The 2024 edition is archived and superseded. No forecast for a later year is stated.

The current 2026 accessible-events policy specifies an eight-working-day captioning notice period.

Participation support is defined by the event policy; purchased services are priced by the supplier rate card.

The reference annex has its own scope. Staff should distinguish operational permission from commercial price, evidence retention and service specifications. Publication of a code or a process owner does not create a missing technical limit or a financial guarantee.

Amendment log: this edition consolidates the current timing rule and ownership path. Historical examples remain in the archive for traceability. They are not exceptions to the current rule. A request citing an older edition must be checked against the effective document before execution.
