Production deployment windows - historical edition

ARCHIVED 2024; superseded

ARCHIVED, SUPERSEDED: this 2024 edition is retained for historical record only and is not the current operating policy.

The retired 2024 release calendar assigned weekday deployments to 20:00 to 22:00 UTC.

The old edition covered the same operating activity. Its prior timing must not be treated as a forecast. Historic case records show how approvals were documented at the time; they do not authorise new work under that edition.

Production deployment windows - historical edition

ARCHIVED 2024; superseded

Historical route register. These entries are examples of administrative queues in the retired edition, not current forms.

Registry REL-680: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry REL-691: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry REL-702: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry REL-713: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry REL-724: record the request in the pending owner-verification queue; this entry is not the named exception route.
