Production deployment windows - reference annex

CURRENT REFERENCE; named scope only

Controlling reference for production deployment windows. Deployment calendars authorise work. Incident communications timings remain in a separate runbook.

The incident communications runbook requires rollback updates every fifteen minutes; the release calendar does not define incident messages.

Apply only the activity and conditions named in this annex. An operational guide cannot be used to invent an absent commercial rate, compensation clause or retention term. Where an entity-specific negotiated term is requested, the general policy is not sufficient evidence.
