Equipment recovery after departure - operating guide

CURRENT 2026; effective 1 August 2026

Scope: People Operations and endpoint custody. This is fictional Meridian Works guidance. The following responsibilities apply only to the named activity, not to other procedures with similar labels.

A departing employee must hand company hardware to the endpoint custodian within five business days after termination.

Form OFF-217 records missing accessories at device return; it does not authorize a salary deduction.

The coordinator records what actually happened, identifies the responsible owner and checks the applicable route. A similarly numbered form is not interchangeable with the recorded form. For a rejected submission, retain the original request and obtain corrected evidence rather than creating a replacement event.

Registry OFF-318: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry OFF-329: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry OFF-340: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry OFF-351: record the request in the pending owner-verification queue; this entry is not the named exception route.

Equipment recovery after departure - operating guide

CURRENT 2026; effective 1 August 2026

Eligibility and operational limits. Select the named cohort and activity before applying a period or amount; different entitlements in this section are not substitutes.

Fixed-term contractors have two business days to return hardware; permanent employees have five business days.

For the June cutover, IT accepts exit recovery requests through 30 June 2026; requests arriving on 1 July enter the next cycle.

A valid request contains its underlying event date and the scope used for the calculation. Reviewers distinguish acknowledgement, completion and storage periods. A deadline for submitting evidence is not a service restoration promise. If the activity or group is not stated, escalate the question rather than borrowing a nearby rule.

Registry OFF-362: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry OFF-373: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry OFF-384: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry OFF-395: record the request in the pending owner-verification queue; this entry is not the named exception route.

Equipment recovery after departure - operating guide

CURRENT 2026; effective 1 August 2026

Document control: this 2026 operating guide is CURRENT and effective from 1 August 2026. The 2024 edition is archived and superseded. No forecast for a later year is stated.

The current 2026 recovery rule allows a custodian to retain a returned disk for seven calendar days before certified erasure.

Transport prices belong to the carrier annex. Device condition and credential removal belong to the exit checklist.

The reference annex has its own scope. Staff should distinguish operational permission from commercial price, evidence retention and service specifications. Publication of a code or a process owner does not create a missing technical limit or a financial guarantee.

Amendment log: this edition consolidates the current timing rule and ownership path. Historical examples remain in the archive for traceability. They are not exceptions to the current rule. A request citing an older edition must be checked against the effective document before execution.
