Supplier selection and sourcing - historical edition

ARCHIVED 2024; superseded

ARCHIVED, SUPERSEDED: this 2024 edition is retained for historical record only and is not the current operating policy.

The retired 2024 sourcing standard demanded two written equipment bids.

The old edition covered the same operating activity. Its prior timing must not be treated as a forecast. Historic case records show how approvals were documented at the time; they do not authorise new work under that edition.

Supplier selection and sourcing - historical edition

ARCHIVED 2024; superseded

Historical route register. These entries are examples of administrative queues in the retired edition, not current forms.

Registry RFQ-815: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry RFQ-826: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry RFQ-837: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry RFQ-848: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry RFQ-859: record the request in the pending owner-verification queue; this entry is not the named exception route.
