Shared workspace access - historical edition

ARCHIVED 2024; superseded

ARCHIVED, SUPERSEDED: this 2024 edition is retained for historical record only and is not the current operating policy.

The superseded 2024 workspace rule allowed three recurring desk bookings per week.

The old edition covered the same operating activity. Its prior timing must not be treated as a forecast. Historic case records show how approvals were documented at the time; they do not authorise new work under that edition.

Shared workspace access - historical edition

ARCHIVED 2024; superseded

Historical route register. These entries are examples of administrative queues in the retired edition, not current forms.

Registry FAC-247: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry FAC-258: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry FAC-269: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry FAC-280: record the request in the pending owner-verification queue; this entry is not the named exception route.

Registry FAC-291: record the request in the pending owner-verification queue; this entry is not the named exception route.
